Cold Header Die Repair Press

85 TO 1000 TON CAPACITY

DOCUMENT 11033

These economical presses are used in the bolt making industry to press carbide inserts into and out of cold header dies. The presses are enclosed on all sides to withstand the occasional breakage of brittle carbide dies. The access door features a ballistics rated Lexan window.

This style of press is also used by aircraft parts manufacturers to destroy used parts to ensure that they don't return to service.

500 Ton Model

- Large diameter, down-acting ram prevents foreign particles from entering the system as in the older style up-acting presses.
- Variable tonnage control adjustable to maximum tonnage.
- Eye level tonnage gauge.
- Rugged, modern bolted and keyed construction reduces frame fatigue and high pressure deflection.

Fully enclosed work area with shatterproof window reduces hazardous and costly accidents, permits operator to work in confidence with greater efficiency.

- Manual hand lever control valve provides smooth, accurate ram control throughout the work cycle.
- Reservoir with sump type filters and tank cleanout access.
- Simplified hydraulics.
- Slow controlled pressing speed.
